

Since empty
at end,
balanced

(([]))

at this point,
unbalanced = false, and
the function returns

5040 total how many don't begin with a 1 or 5?

```
create array List of points: antList
double closest = distance to first point in list;
int element = 1;
for (elements after first)
    if (distance to element < closest)
        closest = distance to element
        element = i
    end if
end for
next Ant = antList.get(element);
remove antList(element)
totalDistance += distance to next Ant
```
