Max Cunningham

- 3) The addresses above are stored in increments of four because a 32-bit system contains four bytes. Thus, any single address can store up to four bytes.
- 4) The largest array size I could get was 268,435,452. I ran the program 10 times to get this number.
- 7) 24 people are needed for there to be a 50% probability that two people share the same birthday.
